-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
 Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 January 2005.
 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-58 is/are pending in the application.

DETAILED ACTION

Allowable Subject Matter

Claims 3,6,7,9-20,22,23 , 28-30,36-40,44,45,49-51 ,53 and,54-58 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. None of the references of record teaches or suggests the teachings of the dependent claims including using air as the co-flowing fluid (oxy-nitrogen), applying a laser beam to the particles for propulsion or modification, propelling the particles at a velocity higher than that achieved by optical propulsion, using a liquid/a /precursor droplets as the propelling fluid or immersion fluid; processing the precursor; or using particles of biological materials. See the aforementioned dependent claims for specific details.

The indicated allowability of claim 2,21,24-26, and 35, are withdrawn in view of the newly discovered reference(s) to Wright et. al., U.S.P. No. 5,844,192. Rejections based on the newly cited reference(s) follow below. The Examiner regrets any inconvenience caused to Applicant by the action.

Claims 2 and 35 has been cancelled by Applicant.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1,4 ,5 ,8,21, 24-27, 31-34,41-43,46-48, and 52 are rejected under 35 U.S.C. 102(e) as being anticipated by Wright et. al., U.S.P. No. 5,844,192.

Wright et. al. teaches (Figs.1-2) a method and apparatus for depositing material on a substrate 20 comprising the steps of: entraining particles 14 within a stream of a hollow co-flowing gas 34, (Note gas can include inert gas or argon) propelling the particles towards the substrate using the fluid and depositing the particles on a substrate (substrate appears to be either glass or semiconductor, also substrate appears to be heated when the particles engage the surface) wherein there is a means 44,45 for limiting the lateral spread of the particles, which clearly, fully meets Applicant's claimed limitations.

A copy of PTO-1449 will be included in this office action.

Response to Arguments

Applicant's arguments with respect to claims 1,2,4 ,5 ,8, 24-27, 31-34,35,41-43,46-48, and 52 have been considered but are moot in view of the new ground(s) of rejection.

Because the new grounds for rejection was not necessitated by Applicant's amendment, this office action has **NOT** been made final.
